- 1. (Amended) An electrical connection arrangement comprising an electrical conductor track element having at least one connection portion electrically connected to a connection zone of an electrical component, wherein a wall is provided in the vicinity of said connection portion and said connection zone, such that a basin is formed and an originally flowable molding mass is distributed in said basin, such that said connection portion of the electrical conductor track element and said connection zone of the electrical component are completely covered by the molding mass.
- 13. (New) The electrical connection arrangement of claim 1 wherein said electrical component has a body that forms a part of said basin.
